ITHACA ENERGY

Career Opportunity

Digital Technology Partner

About Us

Ithaca Energy is a dynamic and ambitious business, on a rapid growth journey, recognising that the energy industry is entering a new era. As we move towards energy transition, our commitment to the North Sea is unwavering. We are a leading full cycle exploration and production company headquartered in Aberdeen, Scotland. The business has built a diverse and high value portfolio of operated and non-operated assets across the Northern & Central North Sea and West of Shetland.

As a leading North Sea Operator, we are an agile and driven business, taking a pragmatic approach to oil & gas production through innovative thinking and advanced technologies. Our goal is to maximise value through the safe, efficient, and responsible production of our assets. Success is dependent on talent and with bold and inspired people we will create a workplace that is diverse and equitable and building a culture of collaboration and inclusion.

Position Overview

Ithaca Energy is accepting applications for the position of Digital Technology Partner, located in our Aberdeen Office.

The Digital Technology Partner (DTP) is a strategic business partner role, accountable for delivering process improvements through data and technology to produce high value outcomes aligned with business strategy.

The DTP will work with business leaders to improve business functions/value streams, with data and technology solutions. They will be responsible for defining programmes, the sequence and scope of projects, establishing the business case and defining the business change activities that are needed to realise goals and ensure value optimisation.

As DTP you will contribute to improvement in business performance and provide the interface between asset and functional expertise to internal and external digital and IT experts.

Responsibilities

- Manage a network of cross functional stakeholders at all levels of the Organisation, developing relationships to build rapport and trust.
- Lead business stakeholder engagements to inform, influence, and challenge existing processes and articulate how technology solutions will deliver improved performance.
- Be the interface between the Asset and Functional teams with the Technology and Innovation team to stimulate, surface and shape business demand.

- Identify opportunities for process improvement, to ensure the Technology and Innovation team and external IT partners, deliver quality solutions, on time and within budget.
- Co-create and drives the technology plan for the lines of business or value streams you are responsible for. Operate as the business partner shaping how the business vision is realised from data and technology solutions.
- Partner with enterprise architecture to develop and maintain multi-year business capability roadmaps.
- Partner with IT operations to ensure a sustainable support model is in place.
- Focus on business value rather than technical solutions to develop ideas using digital awareness, risk assessment, business capability and continuity requirements.
- Maintain broad understanding of the latest technologies, within a variety of different industries, and how they could be applied within the Organisation.
- Be able to manage your workload to ensure project and initiative progress, including consistent and effective communication. This includes managing escalation and avoiding risk.
- Perform accurate budgeting and forecasting across projects and/or programs for your business unit or value stream.
- Ensure business value realization and optimization, from value plans through consultancy, business case development, financial awareness, managing expectations, and identifying opportunities to add value.
- Be aware of new and emerging technologies, services, and concept and be able to assimilate new products/technologies rapidly to enthusiastically embrace new ideas.

Qualifications and Experience

- Experience in a similar role, you will have a proven track record in business analysis/project management with experience of leading organisational change management.
- Experience of working with and delivering solutions for ERP Systems such as SAP, Sun Systems, Maximo, Oracle eBusiness or MS Dynamics
- Demonstrable experience working with Data and BI solutions to deliver data driven insights and transformative change.
- Demonstrable evidence of running successful improvement programs which leverage the latest technologies including change management aspects.
- Deep Knowledge of business processes, data and IT systems utilised within an industrial and corporate environment.
- Knowledgeable with regards to the technical, commercial and risk factors of cloud, mobility, IoT and other digital technologies.
- Demonstrable success of effectively managing multi-year programmes of work.
- Proven track record in negotiation, communication, and engagement up to CxO level.
- Strong business acumen and commercial awareness.

We recognise you may not fulfil every criteria but if you meet most of them please apply
